

Integrated high-tech

The new Waldmann "tycoon" suspended luminaire with integrated light management system

The new "tycoon" suspended luminaires are ideal for individual offices and small meeting rooms. Energy-efficiency light management with simple, individual control using commercially available switches.

The Waldmann "TWIN-C" lighting philosophy represents the ideal implementation of lighting concepts (Concepts) with precisely tailored lighting components (Components).
(Picture: Waldmann)

The TWIN-C lighting philosophy developed by Waldmann is being further expanded with the new "tycoon" suspended luminaires with integrated dimming and light management technology. Due to the complex installation, it was difficult until now to equip suspended luminaires with luminaire-specific modules in order to provide an individual dimming function or presence and daylight-dependant control. With the Touch Dimm[®] technology, Waldmann "tycoon" suspended luminaires can now be directly actuated and controlled via a commercially available switch installed on the wall, without the use of a control unit and dimmer. In addition, these luminaires can be equipped with a remote control and can also be used as a master luminaire in configurations with three additional luminaires. An ideal solution for individual offices and small meeting rooms. This considerably broadens the planning spectrum since the immense energy and lighting technology advantages of a comprehensive light management system are no longer reserved only for office configurations with integrated building management systems or planning concepts with free-standing

luminaires. With the entire "tycoon" series from Waldmann, the planner has a solution package at his disposal, which provides professional lighting management, while offering high energy savings potential and extremely pleasant, glare-free lighting comfort at the same time.
