Planning takes freedom. For the functional lighting of office environments, the Waldmann "tycoon" luminaire series offers a broad range of products in the form of free-standing, suspended, table, and wall-mounted luminaires. The new surface-mounted luminaire is a structured expansion of this design line. With ceiling heights of less than 2.40 m, the new "tycoon" surface-mounted ceiling luminaire can now be installed in corridors, paths, and offices that are not subject to the requirements of EN 12464.

The luminaire provides a direct lighting portion of 76%. However, the specially developed reflector geometry produces an indirect lighting portion of nearly 25 percent. This creates a pleasant lighting atmosphere, which can additionally be individually dimmed. This new design is supplemented by corresponding models for wall-mounted applications.

The "tycoon" series from Waldmann provides the planner with a solution package that offers specially developed, premium components for both the purely functional work areas and for zones with functional/decorative lighting requirements.

The TWIN-C lighting philosophy developed by Waldmann is thereby further expanded with the new "tycoon" ceiling and wall-mounted models. The advantages for the planner are that the Waldmann "tycoon" luminaire series is synonymous with professional lighting management, offering high energy savings potential and extremely pleasant, glare-free lighting comfort at the same time.

Ideal design features, for corridor and path areas, creating a pleasant, glare-free lighting environment through special back-ground lighting.
